Technologies: Git, Github, Docker, Swagger, Postman

Frontend: React, Next.js, Tailwind CSS, HTML/CSS/JS, jQuery, Bootstrap

Backend: Spring boot, Spring security, Spring Cloud, ExpressJS

Databases: Microsoft SQL Server, MySQL, PostgreSQL, MongoDB

English: Intermediate

Soft skills: Strong self-study capabilities, effective communication, and collaborative skills

Projects

E-commerce website - Fullstack Developer

Total members: 1 member

Description: EcommerceShop is a modular e-commerce platform that provides both admin and customer. In admin side, it helps admin to manage products, categories, brands, users, customers, orders, shipping, sale reports, settings and customer chat. In customer side, it helps customers to browse products by category, view product details, place orders, update delivery address, make payments, chat with admins, and interact with a chatbot for product recommendations.

Technologies: Springboot, Spring Security, MySql, MongoDB, Redis, FAISS, S3, Web Socket, Thymeleaf, jQuery, Bootstrap

Tasks:

- Designing project structure according to modular architecture
- Build all common entities for the system
- Implementing all features in admin side such as products, categories, brands, users, customers, orders, shipping, sale reports, settings management, uploading image to S3
- Implementing all features in customer side such as browsing products by category, viewing product details, placing orders, updating delivery address, making payments and interacting with a chatbot for product recommendations.
- Building the submodule for chat service between admin and customer, the product recommendation system for customer
- Configuring security for authentication and authorization in both admin and customer side
