SUMMARY

I am a passionate full-stack developer with expertise in building scalable, user-friendly web applications and designing system architectures. Currently, I am exploring AI and System Design to integrate innovative features into my projects. I value continuous learning, teamwork, and adaptability, striving to contribute to impactful projects while driving success for my team.

EDUCATION

University of Science - VNU

Sep 2021 - Expected Sep 2025

Bachelor degree in information technology

GPA (Ten-point-scale): 9.09/10

GPA (Four-point-scale): 3.85/4

9/2021-7/2024

RELEVANT COURSEWORK

Introduction to Software Engineering, Object-Oriented Programming, Data Structures and Algorithms, Programming Techniques, Operating System, Database Management System, Web Development, Windows Programming, Software Design, Software Requirement, Design Pattern, Software Architecture, Advanced Web Development.

TECHNICAL SKILLS

Programming languages: Java, Javascript, C/C++

Frontend: React, Vue.js, JavaScript, TypeScript, HTML, CSS, Tailwind CSS, jQuery, Bootstrap

Backend: Spring boot, Spring security, Spring cloud, ExpressJS, RESTful APIs, WebSockets

Database: Microsoft SQL Server, MySQL, PostgreSQL, MongoDB, Redis

Technologies: Git, Github, Github Actions, Docker, Swagger, Postman, Jira, Slack

WORK EXPERIENCE

NNC Scientific Company Limited

7/2024-8/2024

Software developer freelancer

- Receive and exchange business requirements with clients.
- Build an invoice generation module based on specification requirements.
- Release the product to customers and provide maintenance.

PROJECT EXPERIENCE

VOU – Marketing with Real-time Games

Team size: 5 members

Backend Developer

11/2024-1/2025

Description: VOU – Gamified Marketing Platform is an innovative solution that enables brands to create viral promotional campaigns through real-time interactive games, such as quizzes and phone-shaking challenges, enhancing user engagement and brand visibility. Evolving from a monolithic DDD design to a microservices architecture, it integrates database replication, caching, and optimized performance for scalability. VOU ensures a seamless, interactive marketing experience.

Technologies: SpringBoot, Spring Security, Microservices, Spring Cloud, JWT, WebSocket, MySQL, MongoDB, Redis, RabbitMQ, Docker, React, React Native, Typescript, Tailwind CSS

Responsibilities:

- Design an ERD (Entity-Relationship Diagram) for the database schema of the entire system.
- Build the system using a monolithic architecture following a domain-driven design (DDD) approach.
- Design and build the system using a microservices architecture.
- Write API, Unit Test for Game Service, Notification Service
- Implement WebSocket for Quiz Realtime features.
- Write API documentation using Swagger.
- Collaborate with the frontend team to integrate the backend services with the frontend application.

Movies Recommendation

Team size: 3 members

Frontend Developer, Leader

12/2024-1/2025

Description: The website enables users to discover and watch movies across various categories, including trending, popular, and newly released films. Users can search, filter, and access detailed actor information, as well as rate movies, create watch lists, and create favourite lists. Advanced features include query-based search, history-based recommendations, and genre-based suggestions, navigation features base on user's description.

Technologies: Spring Boot, Spring Security, JWT, MongoDB, Redis, RAG-LLM, Docker, React, React Query, Redux, TypeScript, Tailwind CSS

Responsibilities:

- Build entire UI for the frontend application using React, Tailwind CSS
- Implement all user's features in the frontend application
- Integrate APIs with backend service
- Use Redux for state management, React Query for fetching data
- Implement CI/CD pipeline for the frontend application
- Collaborate with the backend team to develop project efficiently

Online Novel Aggregation and Reading Application

Team size: 4 members

Backend developer

5/2024-7/2024

Description: The Online Novel Aggregation and Reading Application enables users to search, read, and manage novels from multiple online sources without storing content. It offers customizable display settings, bookmarking, seamless chapter navigation, and export options (PDF, EPUB, MP3) for offline reading. A flexible source management system ensures high-quality content by prioritizing sources and switching automatically when needed. Built with a plugin-based architecture, it supports dynamic source and format updates without system recompilation, ensuring a seamless reading experience.

Technologies: Spring Boot, JSoup, Spring Security, Docker, Typescript, ReactJS, MUI, Redux-Persits, Tailwind CSS, redux-toolkit, zustand, tanstack-react-query, react-loading-skeleton

Responsibilities:

- Build a plugin to crawl novel data from the source [tang thu vien](#)
- Design model and handle exceptions for entire backend application
- Build a plugin to export novel data to PDF, apply multithreading to improve performance when downloading novel data.
- Write unit tests for crawling and exporting plugins
- Implement features plugins management, user authentication
- Deploy the backend application on render.com
- Write API documentation using Swagger

E-commerce Platform

Total members: 1 member

Fullstack developer

7/2024-9/2024

Description: EcommerceShop is a modular e-commerce platform that provides both admin and customer. In admin side, it helps admin to manage products, categories, brands, users, customers, orders, shipping, sale reports, settings and customer chat. In customer side, it helps customers to browse products by category, view product details, place orders, update delivery address, make payments, chat with admins, and interact with a chatbot for product recommendations.

Technologies: Springboot, Spring Security, MySql, MongoDB, Redis, FAISS, S3, Web Socket, Thymeleaf, jQuery, Bootstrap
